Medical Records
HX - 07/11/14 - Fenestrated patellar ligaments

Exam - Baseline - Sound

Treatment - None - Will not blister stifles until needed or if needed again

12/07/2014 Lawson

Colic Note

Observation: Horse has been lethargic, laying down more than usual in lateral. Owner gave 1000# dose banamine PO about 11:30. Just came back from first big barrel race.

12:45: BAR, HR: 52 (anxious) mm: pink/moist, CRT <2sec T: 100.2 GI sounds positive in all four quadrants strong.
NG Tube: No net reflux. Gave 1/2 gallon mineral oil and 1/2 gal water with electrolytes via NG tube.
Rectal: very pliable impaction palpable just left of midline, at fingertips. Otherwise NSF. Normal manure in rectum.

Kept for monitoring over the day.

3:30pm: passed 1 pile normal moist manure-> slightly depressed/quiet

5:20pm: Gave ~5L water via NG tube. Plan: give 10cc banamine IV at 9pm

7:00pm: HR: 36. GI sounds positive in all four quadrants. 1 new pile of manure. Stills sedated from NG tube.

9:00pm: Gave 10cc banamine IV. 1 new pile of manure. BAR, HR: 36 GI sounds positive in all four quadrants.

2:00am: laying down, looked at belly. Got up on own. BAR when standing, passed 1 new pile of manure. HR: 40, GI sounds positive in all four quadrants

5:15am: Was down in lateral, laying quietly since about 4:15. Got up on own. HR: 36. GI sounds positive in all four quadrants. 1 new pile of manure

12/08/2014 Honnas

Daily Observation

Cinderella is BAR this morning. HR 36, GI sounds are positive in all 4 quadrants. There are multiple piles of oily manure in her stall. She has a good appetite for the small amounts offered.

Plan: continue to monitor for signs of discomfort, attitude, appetite and manure production

BB

12/08/2014 Lawson

Colic Note

7:15am: HR: 36, RR: 16, T: 99.7, MM; pink/moist, CRT <2sec. BAR, no ocular or nasal discharge bilaterally. Thoracic auscultation WNL. DPs WNL x4, no signs of lameness. Three piles of well formed manure, oil present, adequate water

Texas Equine Hospital
13688 South State Highway 6
Bryan TX

consumption overnight. GI sounds positive in all four quadrants. PCV: 36%, TP: 6.6 g/dL

8:00am: Rectal exam: Large colon impaction no longer palpable- NSF

9:00am: Great appetite

12pm: Laying quietly in sternal, 1 pile manure

Feeding Schedule

Handful Senior Pellets at 9am, 11am, 1pm

12/23/2014 Stoudt

Medical Note

Hx: owner requests stifles to be injected

Exam: none

Imaging: none

Diagnosis: none

Treatment: Inj. MFTJs w/ 50mg Gent, 20mg Legend, 5mg Kenalog

12/24/2014 Lawson

Colic Note

Hx: Quieter than usual today. Decreased appetite tonight and laying down more than usual

Observation/Treatment: 5:30pm presentation - Temp 100.6. HR 50, anxious/nervous. GI: (+) x4. MM - pink, moist. CRT < 2 sec. Bright, no overt signs of pain. Rectal - many fecal balls in small colon; otherwise NSF. NG tube - no net reflux. Gave 1/2 gallon MO and H2O w/ electrolytes. Gave 10cc Banamine IV; kept for overnight observation. 8:40pm - passed a pile normal manure. 10pm - passed another large pile normal manure. HR 36. Great GI sounds all four quadrants. Standing quiet. 12am - BAR, comfortable, passed another pile. 2am - passed another large pile of manure. 6am - HR 36, GI sounds are good and strong all four quadrants. standing comfortably

12/25/2014 Lawson

Colic Note

Hx:

Observation/Treatment: 7:00am - Temp 99.9. HR 38. RR 10. MM - bright pink, moist. CRT < 2 sec. BAR. Passed five piles manure overnight. Drank 1/3 bucket H2O. Walking uncomfortably in stall. Thoracic auscultation WNL. Eyes and nostrils clean. GI: (inc) x4. DPs WNL x4. No oil on perineum yet, or seen in manure. Passed additional pile normal manure this am. Gastroscopy - mucosa along margoplicatus appears thin. Otherwise NSF

Hx: Locked up L stifle over the weekend

Exam: Baseline - sound baseline and after flexion. L stifle locking intermittently -> sore to palpation of stifle

Imaging: none

Diagnosis: Intermittently locking L stifle

Treatment: Need to warm up well prior to running, need to walk in straight line/large circle for 30-40 minutes daily w/ rider, needs weight on back. Recommend Cavalettis, backing up, "walking up" hill work helps; recommend horse remains turned out 24/7

01/11/2015 Stoudt

Daily observations 1/10-11

Cinderella was BAR over the weekend, with an excellent appetite and adequate water consumption. She passed multiple piles of manure daily. It was normally formed except for Saturday night, when she passed multiple piles of loose, cow pie manure. Her temperature remained normal and she was bright. She did not show any signs of lameness and walked well in the stall. She was seen laying down several times, but was bright and comfortable, without any signs of pain or discomfort.

Plan: Hospitalized for lameness work-up and observation

Medications:

1. 1 scoop omeprazole PO SID

mth

01/12/2015 Honnas

Daily Observation

Cinderella is BAR this morning. She has a good appetite and multiple piles of normal manure in her stall. All 4 soft ride boots are in place. She shows no lameness or discomfort this morning.

Plan: Monitor for discomfort - lameness exam

Medications:

1) Omeprazole 1 scoop PO SID PM

BB
